

MICROPUR K-2008

Chemical nature	Water dispersion of aliphatic polyurethane
Appearance	Liquid
Solids content	16 ± 2 %
pH	2,0 – 4,0
Ionicity	Cationic

Applicazioni

MICROPUR K-2008 è un poliuretano alifatico cationico in dispersione acquosa. È un prodotto di buona penetrazione indicato come legante nei fondi cationici rullabili, per migliorare gli ancoraggi delle rifiniture che seguono.
Se ne consiglia l'impiego su pelli che richiedono rifiniture particolarmente leggere, tipo nappa abbigliamento o calzatura.

Main applications

MICROPUR K-2008 is a water dispersion of cationic aliphatic polyurethane. It has good penetration features and it is suitable as binder for cationic bottom coat to be or polished, in order to improve adhesion. We suggest to use it for soft and light articles such as garment nappa or shoes.

KEEP FROM FREEZING - CAN BE STORED FOR 6 MONTHS BETWEEN +5 AND +35°C

This sheet is a synthetic illustration of the product to enable the user to employ it at the best. Properties and values are not, therefore, sales specifications.

Our application recommendation are in line with our present state of knowledge and they do not exempt the customer from performing his own tests to determine the suitability of the supplied products for the intended purposes. Application of the products lies outside the scope of our control and therefore comes within the customer's sphere or responsibility.

Expiry date refers to the product well closed in the original container, correctly stored. Some particularly sensitive products, when open, should be used rapidly.

Stir well before using the product, close tightly the container to preserve the properties.
