

# BIOTASE JN

Enzymatic agent suitable for soaking: it offers the possibility to perform soaking of bovine skins in a controlled way.

## TYPICAL ANALYSIS

Appearance	Clear powder
Concentration	<i>approx</i> 3100 l.v. units
pH (10 % solution)	7.0 – 9.0

## PROPERTIES

BIOTASE JN has been formulated to enable soaking at a pH value above the traditionally reached through enzymatic soaking: so water is efficiently absorbed and the skin come back to its original hydration state in short time. This lower to a minimum the possibility of a bacterial attack.

For fresh salted hides the time of soaking range 3 to 6 h, while dry hides need from 18 to 24 h.

The aforementioned properties enable a firmer leather to be obtained, with less defects.

## APPLICATION

It is better to use this products by adding it to a soaking float whose pH has been raised to *ca* 9.0 with sodium hydroxide.

We suggest 0.4÷0.5 % for fresh salted hides and 1.5÷2.0 % for dry hides.

When correctly stored, it is stable 36 months.

This sheet is a synthetic illustration of the product to enable the user to employ it at the best.

Properties and values are not, therefore, sales specifications.

Taking into account the several possibilities of application of this product, no warranty of the results is possible.

**Expiry date refers to the product well closed in the original container, in fresh and dry area.** Some particularly sensitive products, when open, should be used rapidly.

**Stir well before using the product, close tightly the container to preserve the properties.**
