

# DERMADOL IGX

DERMADOL IGX is a semi- synthetic anionic fatliquor.

## TYPICAL ANALYSIS

Appearance	medium brown liquid
pH (10 % solution)	7.0 ± 1
Active Substance	62 ± 3
Acids stability	good
Stability to electrolytes	moderate
Chrome stability	poor (not recommended in chrome baths)
Lightfastness	Very good

## PROPERTIES

DERMADOL IGX has a noticeable lightfastness, producing a very clean colour, so it is ideal to obtain white and pastel shades without yellowing problems. Being semi-synthetic, DERMADOL IGX does not originate fatty spues never at very low temperatures.

On full grain leathers, DERMADOL IGX may be used as a feel modifier in combination with other fatliquors more filling.

Suitable for suede as a main fatliquor and final one, it produces good softness and excellent brightness as well.

DERMADOL IGX may be only partially extracted from leather in common analysis techniques.

## APPLICATION

Use 2-6 % based on shaved weight in most applications.

When correctly stored, it is stable 12 months.

This sheet is a synthetic illustration of the product to enable the user to employ it at the best.

Properties and values are not, therefore, sales specifications.

Taking into account the several possibilities of application of this product, no warranty of the results is possible.

**Expiry date refers to the product well closed in the original container, in fresh and dry area.** Some particularly sensitive products, when open, should be used rapidly.

**Stir well before using the product, close tightly the container to preserve the properties.**
