

# DERMADOL NSI

DERMADOL NSI is a natural based sulphited fatliquor.

## TYPICAL ANALYSIS

pH (10 % emulsion)	6.0-8.0
Active content	62 ± 3 %
Appearance	Yellow brown liquid
Acids, electrolytes, chromium salts stability	Very good
Lightfastness	Very good

## PROPERTIES

DERMADOL NSI is a general purpose fatliquor, giving very soft leathers with warm hand, similar to that obtainable with fish based fatliquors. Moreover DERMADOL NSI has the advantage of giving odourless leathers non yellowing during the times. These properties make DERMADOL NSI the ideal product for both upholstery and garment leather. Being very lightfast, DERMADOL NSI is ideal for the production of white and pastel shades.

Its stability to electrolytes, etc., makes DERMADOL NSI particularly suitable to the addition to chrome floats for tanning and retanning, to neutralisation floats and to retanning floats when using natural and synthetic tannins, in order to produce a softer leather than obtainable by the final addition of the product.

## APPLICATION

The suggested amount are from 3 to 4 % for shoes; from 10 to 15 % for garment or upholstery; from 0.5 to 2 % in retanning-neutralization.

When correctly stored, it is stable 12 months.

This sheet is a synthetic illustration of the product to enable the user to employ it at the best.

Properties and values are not, therefore, sales specifications.

Taking into account the several possibilities of application of this product, no warranty of the results is possible.

**Expiry date refers to the product well closed in the original container, in fresh and dry area.** Some particularly sensitive products, when open, should be used rapidly.

**Stir well before using the product, close tightly the container to preserve the properties.**
