

# DERMASOFT FD LIQ

DERMASOFT FD LIQ is a fixing agent which greatly improves the wet fastness properties of many acid and direct dyes i.e. to perspiration, water and washing.

## TYPICAL ANALYSIS

Chemical constitution	Cationic nitrogenous condensate
Appearance	Colourless liquid
Solids content	25 ± 3 %
pH (10 g/l)	3÷5
Solubility	Readily soluble in water

## PROPERTIES

DERMASOFT FD LIQ enables a far greater number of dyes to be used to meet wet fastness requirements particularly for shoes, where full penetration is required, and also for clothing and gloving leathers. It does not have an adverse effect on the handle of the leather produced or significantly affect the shade of dyeing of retanned leathers.

DERMASOFT FD LIQ does not adversely affect the lightfastness or rubbing properties of leathers dyed with acid or direct dyes.

DERMASOFT FD LIQ produces a shade deepening effect on combination or vegetable tanned leathers where dye affinity is poor.

## APPLICATION

The died leathers are thoroughly rinsed to remove any residual unfixed dye and then after-treated in a fresh bath containing DERMASOFT FD LIQ, e.g.:

Retanned side:	0.5 ÷ 2.0 %	on shaved weight	run 30'
Suede split:	1.0 ÷ 4.0 %	on shaved weight	run 30'

When correctly stored, it is stable 12 months.

This sheet is a synthetic illustration of the product to enable the user to employ it at the best.

Properties and values are not, therefore, sales specifications.

Taking into account the several possibilities of application of this product, no warranty of the results is possible.

Expiry date refers to the product well closed in the original container, in fresh and dry area. Some particularly sensitive products, when open, should be used rapidly.

**Stir well before using the product, close tightly the container to preserve the properties.**
