

DERMASOFT PP

DERMASOFT PP is a blend of organic and inorganic fillers.

TYPICAL ANALYSIS

Appearance	off-white powder
Total solids	> 92 %
pH (1:10 water dispersion)	5.0÷7.0

PROPERTIES

DERMASOFT PP disperses readily in water to produce a cloudy suspension. DERMASOFT PP is recommended for use in the retannage of chrome, vegetable and combination tanned leathers and imparts excellent fullness and tightness.

DERMASOFT PP penetrates into the leather and is deposited within the fibre structure, particularly in the looser areas. By virtue of its mode of action, the use of DERMASOFT PP in retannage complements the action of syntans and resins and offers the following advantages:

1. Preferential filling of bellies and flanks leading to a more uniform handle and substance across the side of skin.
2. Improved buffering characteristics on suede and corrected grain leathers.
3. It doesn't deeply affect the dye yield.

APPLICATION

DERMASOFT PP is generally applied just before the main fatliquor or alternatively it can be added into the retannage bath.

An offer of 2.0÷4.0 % (based on shaved weight) fulfils most requirements.

When correctly stored, it is stable 36 months.

This sheet is a synthetic illustration of the product to enable the user to employ it at the best.

Properties and values are not, therefore, sales specifications.

Taking into account the several possibilities of application of this product, no warranty of the results is possible.

Expiry date refers to the product well closed in the original container, in fresh and dry area. Some particularly sensitive products, when open, should be used rapidly.

Stir well before using the product, close tightly the container to preserve the properties.
