

**SUBJECT: PACKAGING LABELING**

According to Legislative Decree 152/2006 (second period of paragraph 5, article 219), *“Producers are required to indicate, for the purposes of packaging identification and classification, the nature of the packaging materials used, based on Commission Decision 97/129/EC.”*

This means that the obligation to place the alphanumeric code identifying the material on packaging has been introduced, as per Commission Decision 97/129/EC, following the amendments introduced by Legislative Decree 116/2020. Therefore, all packaging must include this code. Regarding the placement of the identifying alphanumeric codes, the obligation rests explicitly with the producers.

All other information remains voluntarily applicable.

To convey the composition of the packaging throughout the supply chain, manufacturers have opted to physically apply environmental labeling directly onto the packaging.

If the coding is not directly printed on the packaging, we will promptly inform our customers of the nature of the packaging through written documentation and communication to the relevant offices.

Remaining available for any further detail or clarification, we extend our kind regards and wish you a good work.
