

DERMAFLEX CF

DERMAFLEX CF is a highly concentrated liquid amino resin.

TYPICAL ANALYSIS

| | |
|--------------------|---|
| Solids | 40 ± 3 % |
| pH (10 % solution) | 9.0 ± 1.0 |
| Light Fastness | Excellent |
| Solubility | Completely miscible with water |
| Stability | Excellent |
| Compatibility | It shows amphoteric properties, being compatible with anionic syntans resins and vegetable extracts as well as with chrome. |

PROPERTIES

DERMAFLEX CF has excellent filling properties when used for the retannage of chrome tanned leather. The characteristic handle of the chrome leather is also not impaired. DERMAFLEX CF is ideally suited for whites and all types of pastel shade leathers on account of its outstanding light fastness.

DERMAFLEX CF is suitable for both full and corrected grain leathers and offers excellent buffing properties particularly for tight napped suede.

APPLICATIONS

From 2.0 to 4.0 % during rechroming.

From 2.0 to 6.0 % during retannage of all the articles.

When correctly stored, it is stable 12 months.

This sheet is a synthetic illustration of the product to enable the user to employ it at the best.

Properties and values are not, therefore, sales specifications.

Taking into account the several possibilities of application of this product, no warranty of the results is possible.

Expiry date refers to the product well closed in the original container, in fresh and dry area. Some particularly sensitive products, when open, should be used rapidly.

Stir well before using the product, close tightly the container to preserve the properties.
