

DERMALENE WG

DERMALENE WG is a lightfast white replacement syntan which can be applied universally and is probably one of the best all-round syntan available.

TYPICAL ANALYSIS

Solids	> 92 %
pH (10 % solution)	4.0±1.0

PROPERTIES

DERMALENE WG is a off-white spray-dried powder readily miscible with water and is compatible with other anionic syntans, resins and vegetable extracts as well. DERMALENE WG has excellent affinity for pelt and can be used on most types of raw materials.

As *a solo* tannage it may be applied in a similar way to vegetable tannage. It possess very good light fastness properties and offers an economical and simple method for the tanning of white lining leather.

It may also be used for bleaching and retanning of chrome tanned leather giving excellent fulness, fine and tight grain, and enabling good final buffing properties.

When used as a retannage on vegetable tanned leather, it is often superior to the more acid naphthalene based syntans for bleaching and filling. Being a replacement syntan, it improves the yield when used in the production of sole or other heavy leathers.

APPLICATION

Recommended amounts are generally ranging from 2 to 5 %.

When correctly stored, it is stable 36 months.

This sheet is a synthetic illustration of the product to enable the user to employ it at the best.

Properties and values are not, therefore, sales specifications.

Taking into account the several possibilities of application of this product, no warranty of the results is possible.

Expiry date refers to the product well closed in the original container, in fresh and dry area. Some particularly sensitive products, when open, should be used rapidly.

Stir well before using the product, close tightly the container to preserve the properties.
