

# FITAPOR MM

FITAPOR MM is a Wattle extract based on Mimosa.

## TYPICAL ANALYSIS

Appearance	Light brown powder
pH (10 % solution)	5.0 ± 1.0

## PROPERTIES

When used alone, FITAPOR MM gives a leather quite soft with fine touch. It is recommended in retanning of chrome tanned small calf and side leather. Moreover it is used as a dispersing agent in dyeing. It is also used in retanning of glove leather, giving fullness without altering softness and elasticity. The resulting dyeings are very bright and the leather is glazable. To obtain burnish or brushed leather, we recommend to add FITAPOR MM at the end of the recipe, together with formic acid.

## APPLICATION

Light leather and side box: 3-4 %, based on shaved weight.  
Chrome bovine for shoes and upholstery: 5-6 %, based on shaved weight.

When correctly stored, it is stable 36 months.
