

K-LIME CONC

K-LIME CONC is a mixture of organic acids and salts of nitrogenous bases, particularly studied to improve the liming.

TYPICAL ANALYSIS

Appearance:	Viscous transparent liquid
Active content:	35 ± 3 %
Charge :	anionic
pH (soluz. 1:10) :	5.5±1.0
Solubility in water :	complete

PROPERTIES

K-LIME CONC added to the liming with lime itself , promotes its penetration exalting its effects: its use supports a better use of all product normally applied in liming operations and enables a reduction from 10 % to 15 % in their employment.

It gives to pelts a cleaner and clearer aspect and has the power to reduce primely blood spots. When used in right amounts, it leaves pelts soft and consistent so favouring all the unflensing operations.

K-LIME CONC leaves the grain of the leather compact, elastic and closed: this propriety has been verified on crome tanned leather and on vegetal tanned leather (sole).

APPLICATION

K-LIME CONC is best added to the liming in the proportion of 0.4 %.

When correctly stored, it is stable 12 months.

This sheet is a synthetic illustration of the product to enable the user to employ it at the best.

Properties and values are not, therefore, sales specifications.

Taking into account the several possibilities of application of this product, no warranty of the results is possible.

Expiry date refers to the product well closed in the original container, in fresh and dry area. Some particularly sensitive products, when open, should be used rapidly.

Stir well before using the product, close tightly the container to preserve the properties.
